

Watchakorn Buddeewong

<https://github.com/watchakorn-18k/> , <https://www.linkedin.com/in/watchakorn/>

email : wk18k@proton

Technical Skills

Languages: Python, Go, JavaScript, TypeScript, Dart

Backend: FastAPI, Django, Fiber, Echo

Frontend: React, Svelte, Vue, Nuxt, Flutter

Styling: TailwindCSS, DaisyUI, Vuetify

Databases & Storage: MongoDB, PostgreSQL, MySQL, Redis, Garnet, AWS S3, GCP, Supabase

DevOps & Tools: Docker, Podman, CI/CD, GitHub Actions, Jenkins, Git-flow, Postman, VS Code, Zed, Jira

Testing & Others: Unit/Integration Tests, Locust, Swagger, JWT, 2FA, Stripe, Firebase Auth, FCP

Architecture: Clean Architecture, Microservices, MVC, Flutter BLoC

Typing Speed: 36 WPM , ACC 90%

Experience

Fakduai Logistics and Digital Platform Co., Ltd.

Nonthaburi, Thailand (WFH)

Software Developer (Full Stack Developer)

Jan 2025 - Present

- Served as lead developer, project architect, and coordinator for flagship products (Pinto social media super app & mobile POS system): designed overall project architecture from ground up (including folder structure, Clean Architecture implementation, database schema, real-time event flows, and tech stack decisions), planned technical roadmap, assigned tasks to team members/interns, tracked progress, mentored juniors, coordinated with UX/UI team, debugged issues, and hands-on implemented frontend/backend/mobile features to ensure on-time delivery in a lean startup.
- Led core development of Pinto social media super app (iOS & Android), implementing full-stack features excluding UI design: rich text editor for unlimited content creation (formatted text, media attachments, hashtags/topics), real-time chat (text + images), personalized discovery/search, profile/dashboard management, real-time notifications (likes/comments/follows), and safety features (identity verification, reporting, privacy controls); successfully published and deployed the app to both Apple App Store and Google Play Store, handling complete release processes including app signing, store listing optimization, review compliance, and post-launch updates.
- Designed and implemented user-created chatbot system within Pinto app, enabling end-users to build and customize their own chatbots directly in the platform; developed robust backend integration supporting webhook-based connections from external automation tools like n8n, allowing seamless workflow automation, data syncing, and third-party service orchestration triggered by chat interactions.
- Designed and shipped mobile POS application using Flutter + BLoC pattern, integrating real-time HTTP/WebSocket APIs to enable seamless in-store order processing, inventory sync, and logistics workflow support
- Built scalable backend services with Go (Echo) following Clean Architecture, powering real-time interactions, content feeds, media processing, and event-driven logic across social and POS features.
- Developed responsive SSR frontend with Vue.js + Nuxt.js, optimizing performance, SEO, and user experience for web portals and community/logistics pages.
- Managed multi-database stack: PostgreSQL (Atlas migrations), MongoDB for social/content data, and Redis for pub/sub + caching, ensuring reliable low-latency operations from launch.
- Implemented secure JWT authentication and authorization across all features, with best-practice security including identity verification.
- Integrated Google Cloud Platform (GCP) storage with custom middleware for efficient handling of user-generated media and logistics documents.

- Containerized entire suite using Docker/Podman with health checks and auto-restarts for zero-downtime deployments. Established Jenkins CI/CD pipelines with Git-flow on Bitbucket, enabling fast iterations and consistent releases.
- Wrote comprehensive unit/integration tests to maintain high code quality and support rapid scaling as the platform grows.

IBotnoi

Software Developer (Backend Developer)

Bangkok, Thailand (WFH)

Jun 2024 - Dec 2024

- Engineered scalable bulk user onboarding system for nationwide educational personnel on a platform with millions of registered users, processing CSV uploads and queuing via AWS SQS to support up to 5,000 registrations per day (2.5x improvement over previous manual limit of 2,000/day) without hitting AWS SES or Firebase rate limits.
- Led migration of critical backend services from Python to Go (Fiber), resulting in >50% reduction in server crashes and significantly improved stability under high load for a large-scale educational platform.
- Implemented asynchronous worker with Go (Fiber) + AWS SES for email verification and Firebase Admin SDK for account creation, achieving 90% success rate per bulk through intelligent rate limiting and exponential backoff.
- Designed real-time notification system using Redis (Garnet) pub/sub and AWS SQS, driving 20% increase in package purchases via timely promotional and update alerts.
- Conducted load testing with Locust and optimized architecture, reducing server crash risk by 80% in stress scenarios.
- Developed high-performance RESTful APIs with Go Fiber and FastAPI (Python) adhering to Clean Architecture, ensuring maintainable and scalable microservices.
- Integrated Stripe for secure subscription payments, JWT + 2FA authentication, and custom transaction flows to enable reliable revenue processing.
- Managed MongoDB (Atlas + local) clusters and Redis for caching/queuing, while containerizing services with Docker/Podman and establishing Jenkins CI/CD pipelines with Git-flow on GitLab.

Personal & Open-Source Projects

Bot news IT Discord (Python)

<https://github.com/watchakorn-18k/bot-news-it-discord> (6 stars)

Developed an automated Discord bot using Python and newsapi to deliver hourly IT news updates, featuring a file-based caching system to prevent duplicate notifications. Leveraged GitHub Actions to fully automate server deployment and ensure consistent news delivery across multiple channels.

Go WebSocket Chat (Fiber) – Real-time Multi-room Chat

<https://github.com/watchakorn-18k/go-websocket-chat-live-fiber>

Isolated WebSocket rooms + modern TailwindCSS UI for seamless live communication

Generate Image Web – AI Image Generator (React + TypeScript)

https://github.com/watchakorn-18k/generate_image_web (5 stars)

Full-stack app using EdgeGPT reverse-engineered API, FastAPI backend, Figma-designed UI

Language Translation App using AI – Python/Flet

<https://github.com/watchakorn-18k/Language-Translation-App-using-AI> (9 stars , 4 forks)

Real-time Thai ↔ English translator powered by ChatGPT, Gemini, and Bing Chat with clean, intuitive UI

Kivy Snippets – VS Code Extension

<https://marketplace.visualstudio.com/items?itemName=watchakorn-18k.kivy-snippets> (42,018 installs)

Syntax highlighting, snippets, and real-time error detection for Kivy .kv files – one of the most installed Kivy tools worldwide

Go OTP Fiber (Go)

<https://github.com/watchakorn-18k/go-otp-fiber>

Developed a secure TOTP/HOTP generation and verification service using Go, Fiber, and MongoDB to deliver a lightweight and efficient RESTful API. Leveraged the pquerna/otp library to ensure robust secret management and reliable user authentication

Adventurer Packing Game (C#)

<https://github.com/watchakorn-18k/Adventurer-Packing-Game>

Created a bilingual 2D top-view delivery game in Unity and C# where players complete item delivery missions for points. Features include a comprehensive scoring system and seamless language switching between Thai and English interfaces

My Profile (Typescript/Svelte)

<https://github.com/watchakorn-18k/my-profile>

Built a responsive personal portfolio application using Svelte, TailwindCSS, and DaisyUI, optimized with Bun and Node.js runtimes. Implemented an automated CI/CD pipeline via GitHub Actions to streamline deployment directly to GitHub Pages

Education

Nakhonratchasima Rajabhat University

Nakhon Ratchasima, Thailand

Bachelor of Science (Computer Science)

Expected to Graduate Sep 2024

• Relevant Coursework: Operating System, Web App, Basic Programming, Mobile App Development, Game Development, IOT
